DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, 5-14, 17, 21-22, 24-30, drawn to a method for decreasing beta oxidation in a transformed plant and plant cells thereof via antisense suppression, classified in class 800, subclass 286, for example.
- II. Claim 1-3, 21-22, 24-30, drawn a method for increasing beta oxidation in a transformed plant via overexpression of acyl-CoA thioesterase protein and plant cells thereof, classified in class 435, subclass 69.1, for example.
- III. Claims 15-16, 18-20, 23, 31-36, drawn to a method for optimizing a plant for seed oil production via transformation with multiple genes and transgenic plants and cells thereof, classified in class 800, subclass 281, for example.
- IV. Claim 4, drawn to an isolated protein, classified in class 530, subclass 370, for example.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions; the method of decreasing beta oxidation in a plant of Group I via antisense inhibition, a method of increasing beta oxidation in a plant of Group II via overexpression of acyl-CoA thioesterase protein, a method of optimizing a plant for seed oil production of Group III requiring genes encoding acyl-CoA oxidase and multifunctional protein type II, and the isolated protein of

Art Unit: 1638

Group IV have different modes of operation, different functions, and different effects and utilize different starting materials. Furthermore, the protein of Group IV cannot be used in the methods of Groups I-III, and can be made by an alternate method other than gene expression, such as chemical synthesis.

Claims 1-3, 21-22 and 24-30 will be examined to the extent they read upon the elected invention of either group I or II.

Because the inventions are distinct for the reasons given above and have required a separate status in the art as shown by their different classifications, recognized divergent subject matter, and because the search required for one of the groups is not required for another restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37) CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
